

RELIFE REGENERATIVE

PRP Therapy

A clear overview to help you have an informed conversation with our medical team.

Platelet-rich plasma (PRP) therapy begins with a small sample of your own blood. The sample is processed to concentrate platelets and growth factors, then the PRP is delivered to a target area.

At ReLife, each application is physician-supervised and tailored to your condition and goals.

Why people ask about PRP

ReLife discusses PRP as an option for:

- joint pain and joint conditions
- tendon and musculoskeletal injuries
- hair thinning and hair restoration
- certain aesthetic concerns

These are potential applications, not guaranteed outcomes. Individual response varies.

What a consultation covers

A clinician reviews your symptoms or concerns, health history, medications, allergies and goals to determine whether PRP may be appropriate.

The team will also explain the proposed target area, preparation and delivery, expected recovery and follow-up, risks, alternatives, cost, and an individualized plan.

What the visit involves

1. Blood draw

A small blood sample is collected, similar to a routine lab draw.

2. Processing

The sample is centrifuged to concentrate platelets and growth factors.

3. Delivery and follow-up

PRP is delivered to the target area, with follow-up based on your plan.

What the current evidence and safety picture says

Evidence is condition-specific. PRP has been studied in several musculoskeletal settings, but results are not uniform across every injury, joint, hair, or aesthetic use. A consultation should connect the evidence to your diagnosis rather than promise a universal result.

PRP comes from your own blood, so allergic-reaction risk is low. It still involves a blood draw and injection. Temporary soreness at the injection site may occur, and injection procedures carry risks such as infection. Effectiveness and the pace of improvement can vary.

Could PRP be right for you?

That decision should be individualized. ReLife's medical team can review your condition and goals, explain realistic expectations, and discuss whether PRP or another approach is appropriate.

Reply to this email with the best phone number and time to reach you, and our team can help arrange a consultation.
